Mon, 31 Dec 2018 09:41:00 GMT APPLIED FLUID MECHANICS TUTORIAL No.6 DIMENSIONAL ANALYSIS - The center of pressure is the point where the total sum of a pressure field acts on a body, causing a force to act through that point. The total force vector acting at the center of pressure is the value of the integrated vectorial pressure field.

2019 15:06:00 GMT Applied Fluid Mechanics, Robert L. Mott, Joseph A Untener ... - Stress is the force per unit area on a body that tends to cause it to change shape. Stress is a measure of the internal forces in a body between its particles. These internal forces are a reaction to the external forces applied on the body that cause it to separate, compress or slide. External forces are either surface forces or body forces.
