GMT foundations of electromagnetic theory reitz pdf - The Poynting vector appears in Poynting's theorem (see that article for the derivation), an energy-conservation law: $\hat{\mathbf{u}} = \hat{\mathbf{E}} \cdot \hat{\mathbf{J}} + \hat{\mathbf{E}} \cdot \nabla \phi$, where \mathbf{J} is the current density of free charges and u is the electromagnetic energy density for linear, nondispersive materials,
